

DESCRIPTION OF COURSE

University: University of Economics in Bratislava	
Faculty: Faculty of Commerce	
Course code: KMO OF/OOB21107/21	Title of course: Applied Research Methods
Type, load and method of teaching activities: Form of course: Lecture Recommended load of course (number of lessons): Per week: Per course: 16s Method of study: present	
Number of credits: 10	
Recommended semester/trimester of study: 2.	
Degree of study: III.	
Prerequisites:	
Requirements to complete the course: 40% assignments (2 assignments x 20 points); 60% final paper	
Student workload: Total study load (in hours): 10 credits x 26 hours = 260 hours Distribution of study load Lectures and seminar participation: 16 hours Preparation for seminars: 32 hours Written assignments: 32 hours Final paper preparation: 158 hours Preparation of presentation and presentation itself: 20 hours Consultation for final paper: 2 hours	
Teaching results: In particular, students acquire the following abilities: - principles for the formulation of an empirical research project, in particular in relation to the nature of the variables entering the analysis as well as research sample, - an overview of the main methods of descriptive statistical analysis and inferential statistics, - specification and estimation of econometric models (linear, panel and quantile regression). Students acquire in particular the following skills: - ability to apply research methods to specific problems using suitable software. Students will acquire the following competencies: - ability to define a research problem, to select a research sample adequately, and to choose an appropriate method for answering a research question, - distinguish between methods depending on the nature of the data used, both in the case of cross-sectional, panel data or time series, - correctly interpret the output of econometric models and implement the necessary diagnostics.	
Indicative content: <ul style="list-style-type: none"> • Basics of empirical applied research - research sample and statistical inference. • Applied approaches for descriptive statistics and statistical inference, statistical software. • Linear regression – model specification, estimation and applications. • Linear regression problems – violation of assumptions and their resolution. 	

- Panel data and panel models – specification, estimation and inference.
- Dynamic panel models – specification, estimation and inference.
- Analysis of quantiles and quantile dependence.
- Economic time series modelling.

Syllabus:

- Key concepts in probability theory, descriptive and inferential statistics with cases for applied research. Research sample and implications for statistical inference.
- Applications of descriptive statistics and statistical inference in using software support.
- Linear regression analysis — estimation methods, interpretation, model suitability assessment, prediction and inference.
- Linear regression analysis – testing assumptions and alternative solutions in case of their violations.
- Panel regression models – LSDV approaches, fixed and random effects. Practical aspects of estimating panel models, diagnostics.
- Dynamic panel models – estimation, testing and applications.
- Quantile regression and modern approaches to quantile dependence modelling.
- Selected applications and problems in time series modeling.

DESCRIPTION OF COURSE

University: University of Economics in Bratislava	
Faculty: Faculty of Commerce	
Course code: KMO OF/OOB21112/21	Title of course: Financial Operations in International Business
Type, load and method of teaching activities: Form of course: Lecture Recommended load of course (number of lessons): Per week: Per course: 16s Method of study: present	
Number of credits: 10	
Recommended semester/trimester of study: 3.	
Degree of study: III.	
Prerequisites:	
Requirements to complete the course: 40% seminar paper, 60% exam	
Student workload: Participation in lectures and seminars: 16 hours Preparation for seminars: 32 hours Processing of semester work: 32 hours Preparation for presentation of semester work: 8 hours Processing of final thesis: 60 hours Preparation for presentation of final thesis: 8 hours Preparation for the final exam and discussion for the final study: 104 hours	
Teaching results: Students will obtain following knowledge: - the principles and values of managerial decision-making on the structure of capital procurement in relation to the corporation's equity and the requirements of banks on the basis of new scientific knowledge, - decision-making in the field of foreign exchange cash flow in corporations, - comprehensive financial recommendations in the context of social responsibility. Upon successful finishing of the course, students will obtain mainly following skills: - formulate scientific-research problems in the field of financial operations in international business, select adequately a research sample and apply appropriate research methods, - apply the results of own scientific research in drafting comprehensive internationally acceptable recommendations for corporate finance. Upon successful finishing of the course, students will acquire following competences: - respect and implement ethical, social, economic and legal aspects in the context of scientific research growth, as well as in managerial control and decision-making in the corporate environment, - present the acquired knowledge, argue own opinions on the issue, lead a discussion and work within multidisciplinary teams, - publish the results of our own scientific research activities in the field of international financial operations in respected journals and proceedings registered in the international professional databases WOS, Scopus, etc.	

Indicative content:

- Determinants and instruments of monetary policy of central banks.
- Digitization of banking in the conditions of liberalization and globalization of economies.
- Alternative forms of corporate financing in relation to domestic and foreign customers.
- Cooperation of banks with fintech companies for the creation of managers' investment decision-making concepts in the implementation of tools based on blockchain technologies and raising capital on crowdfunding platforms.
- Issues of corporate debt securities, including subordinated debt.
- Choice of strategy for managing foreign exchange positions and foreign currency cash flow of domestic corporations.
- Default management in the conditions of domestic business entities.
- Restructuring of registered capital and capitalization of assets in corporations.

DESCRIPTION OF COURSE

University: University of Economics in Bratislava	
Faculty: Faculty of Commerce	
Course code: KMO OF/OOB21109/21	Title of course: International Business Strategy and Management
Type, load and method of teaching activities: Form of course: Lecture Recommended load of course (number of lessons): Per week: Per course: 16s Method of study: present	
Number of credits: 10	
Recommended semester/trimester of study: 3.	
Degree of study: III.	
Prerequisites:	
Requirements to complete the course: 40% seminar paper 60% final exam	
Student workload: Total study load (in hours): 10 credits x 26 hours = 260 hours Distribution of study load Participation at classes: 16 hours Preparation for classes: 32 hours Seminar paper work: 32 hours Preparation of seminar paper presentation: 8 hours Final paper work: 48 hours Preparation of final paper presentation: 8 hours Preparation for final exam and discussion: 126 hours	
Teaching results: Students will possess following abilities: - to understand recent trends in internationalization and globalization of business environment and their impact on management of international companies, - to understand the basic prerequisites of international success: strategic capability, partnership capability, staffing capability, learning capability and organizational capability, - to understand how to do qualitative research significant for managing international companies. Students will obtain following skills: - to apply best practices from the course in decision-making process of international companies, eventually in teaching and research, - to apply problem-solving procedures in international companies, to evaluate the strategy and applied management tools and their accuracy in real cases, - to apply qualitative research methods, especially case study research method at their work, both research and educational. Students will gain following competences: - critical and analytical thinking related the right choice of foreign market, suitable method of foreign market entry, option of an appropriate strategy and fitting management tools for an international success,	

- diagnostic and systematic thinking when evaluating each step of internationalization and ways how progress including application of appropriate research methods,
- creative thinking, creation of the research concept based on case study research method, its discussion and defense within the study group, and in discussion with the course teacher.

Indicative content:

- International business strategy and foreign direct investment in era of globalization.
- Managing international strategic partnership.
- International human resource management as a success factor of international companies.
- Innovation and knowledge management in international companies.
- Changes of organization structures as a prerequisite of international success.
- International business management and international marketing management in the time of crisis.
- Research and its implication in international companies.

DESCRIPTION OF COURSE

University: University of Economics in Bratislava	
Faculty: Faculty of Commerce	
Course code: KMO OF/OOB21105/21	Title of course: International Business and Integration Processes
Type, load and method of teaching activities: Form of course: Lecture Recommended load of course (number of lessons): Per week: Per course: 16s Method of study: present	
Number of credits: 10	
Recommended semester/trimester of study: 1.	
Degree of study: III.	
Prerequisites:	
Requirements to complete the course: active participation at consultations: 20% submitting scientific project (written form): 40% defending scientific project (oral form) in a professional discussion: 40%	
Student workload: Total study load (in hours): 260 hours Study load of educational activities - participation at consultations: 16 hours - preparing scientific project: 184 hours - preparation for defending and defending scientific project: 60 hours	
Teaching results: By finishing the course students will obtain following knowledge: - complex and deep knowledge in the field of evaluating macroeconomic and microeconomic aspects, regulation and theoretical approaches to international business and international economic integration, - understand the particularities of international business related to integration processes, - understand recent developments and trends for international business in the European integration area. Students will obtain following skills: - ability to learn actively and to get information from primary and secondary sources about economic integration processes as well as ability to analyze and assess them critically, - ability to use creatively the particular knowledge and information to formulate the research question in a scientific project, - ability to use creatively the particular knowledge and information to solve the research question in a scientific project, - ability to formulate new conclusions and recommendations for relevant parties, - ability to work independently, as well as in team. Students will gain following competencies: - ability to express and communicate own findings and opinions in a professional discussion as well as in a written form (the scientific project should be prepared in the form allowing its publication at national or international level),	

- responding and reasoning in a scientific discussion,
- critical and analytical thinking in the changing conditions for international business in integration environment,
- based on synthetical thinking, drawing conclusions useful for international business in international and European integration environment.

Indicative content:

Concerning the content, this course is focused on key topics for the realization of international business in the international integration environment. In the course are involved topics like:

- The characteristics of integration processes at the macroeconomic and microeconomic level, their comparison.
- The current state and the perspectives of their development.
- The operation mechanism.
- Legal regulation.
- Effects of economic integration from the international business perspective.
- The particularities of international business in the European integration area.

WHYMAN, Philip B., PETRESCU, Alina I. The Economics of Brexit. Springer, 2020, 390 p. ISBN 978-3-030-55948-9

Syllabus:

- Theoretical concepts and approaches in the field of economic integration with respect to international trade and business.
- Integration processes at macroeconomic and microeconomic levels.
- Development, characteristics, and comparison of integration processes in globalized economy.

- Multilateral and regional regulation of integration processes.
- Economic effects of integration processes.
- Integration processes in the European area from the international business point of view.
- Trans-border business transactions within the European integration environment.
- Trans-border business transactions directed outwards the European integration environment.

DESCRIPTION OF COURSE

University: University of Economics in Bratislava	
Faculty: Faculty of Commerce	
Course code: KMO OF/OOB21108/21	Title of course: International Trade - Actual Issues
Type, load and method of teaching activities: Form of course: Lecture Recommended load of course (number of lessons): Per week: Per course: 16s Method of study: present	
Number of credits: 10	
Recommended semester/trimester of study: 2.	
Degree of study: III.	
Prerequisites:	
Requirements to complete the course: <ul style="list-style-type: none"> • 10% - Active participation in discussion within the consultations • 30% - Semester work • 60% - Colloquium in front of the committee and defense of the semester work Semestral works are problem-oriented (formulated) assignments on the chosen scientific topic, the topics will be published before the beginning of the semester.	
Student workload: Total: study load 10 credits x 26 h = 260 hours Separate study load for individual educational activities: Participation in consultations: 16 hours Preparation for consultations: 26 hours Elaboration of semester work: 78 hours Preparation for colloquium related to the semester work: 156 hours	
Teaching results: Students will possess following abilities: <ul style="list-style-type: none"> - after successful completion of the course, the student has experience in the necessary macroeconomic frameworks of international trade in advanced theoretical background, has a systematic and comprehensive set of current knowledge about international trade at the level of the world economy. - by understanding the required literature and selected sources with a high citation response at the international level, student is able to process a set of theoretical knowledge within the field of study and study program as a basis for profiling his own topic, - the PhD. student has experience in current trends in international trade and global value chains, the dynamics of trade in goods and services in the international environment, with an emphasis placed on the territorial priorities of the EU and Slovakia (PRC, Russian Federation, Southeast Asia, etc.), - understanding current trends in key areas of international trade - digitization, payment terms, international marketing, offshoring and outsourcing, fragmentation of value chains and deglobalization elements. Students will obtain following skills: <ul style="list-style-type: none"> - after identifying the literature gap in the particular topic of the seminar work, the PhD. student is able to evaluate innovative approaches and methods of research in international 	

- trade,
- the PhD. student is able to formulate new hypotheses and apply new approaches in his own research relating to partial topic of international trade,
- ability to answer relevantly the professional questions from international trade before the examination commission in a broader context referring to the topic of the seminar work, course content, but also multidisciplinary scope.

Students will gain following competences:

- by participating in lectures and seminars, as well as by preparing a seminar paper, an understanding of scientific approaches in modern international trade and the issue of global value chains at the scientific level,
- critical evaluation of the problem formulated in the form of case studies and the argumentation of own attitude based on processed primary data,
- orientation in advanced databases of statistics and platforms of international trade (OECD, ITC, WTO, Amadeus, etc.), as well as databases of scientific works of fundamental importance in the particular field,
- own critical evaluation and synthesis of theoretical knowledge, formulation of own approaches and research methods, presentation of research results in the field of international trade,
- active and relevant participation within the thematic profile discussions based on data and facts, formulation of the key findings and outcomes of the research using synthesis, competences to defend own research and data based opinion within the discussions at the PhD. Students level as well as course teachers (committee).

Indicative content:

- Macroeconomic definition of international trade in the theories of renowned economists.
- Specifics of the international energy market.
- Dynamics of the position of selected countries in international trade.
- Theoretical definition of global value chains. Critical assessment of the V4 countries' participation in GVCs and its triggers.
- Current trends in value chain research and their application in the Slovak Republic.
- The phenomenon of competitiveness in international trade. Export competitiveness and its meaning.
- New trends in payment instruments in international trade and international marketing.
- Digitization and the impact of Industry 4.0. Preparedness of economies for implementation Industry 4.0.
- Selected aspects of international business operations.

Syllabus:

- Contemporary international trade theories in the works of distinguished economists.

- Global value chains (GVCs) - definition, transformations, trends in fragmentation and localization, application on the Slovak economy. Investigation of trends in international trade through TiVA parameters.
- New scientific approaches in the field of GVCs transformation.
- Scientific polemics on the definition of international competitiveness, the Porter vs. Krugman approach, international energy market - trends, impact of decarbonization, price volatility and impact on terms of trade of selected economies.
- Territorial analyses of "emerging markets" and consequences for the territorial and commodity structure of international trade (goods and commercial services) and international business (foreign direct investment).
- Determinants of exporters' competitiveness and their application in the works of contemporary authors.
- Industry 4.0 and the impact on international trade, digitization of international trade and its specifics, digitization of payment system and adaptation of international marketing.
- Selected aspects and new trends in international business operations, classic vs. innovative approaches.

DESCRIPTION OF COURSE

University: University of Economics in Bratislava	
Faculty: Faculty of Commerce	
Course code: KMO OF/OOB21111/21	Title of course: Macroeconomics of Open Economics
Type, load and method of teaching activities: Form of course: Lecture Recommended load of course (number of lessons): Per week: Per course: 16s Method of study: present	
Number of credits: 10	
Recommended semester/trimester of study: 3.	
Degree of study: III.	
Prerequisites:	
Requirements to complete the course: Class participation including the selection and presentation of a current topic - 30% Research paper – 35% Final exam – 35%	
Student workload: Lectures and seminar participation: 32 hours Preparation for lectures and seminars: 32 hours Elaboration of final paper: 120 hours Preparation for written exam: 72 hours Consultation regarding final paper: 4 hours	
Teaching results: The successful graduate of the course will acquire knowledge mainly about: - theoretical concepts documenting the effects of international trade, international flows of labor and capital on aggregate product, local supply and demand for labor, as well as the relative cost of factors, - the effects of current phenomena such as globalization, integration, outsourcing and the effects of climate change, - the effects of foreign trade policy, such as the introduction of tariffs, quotas or subsidies, but also the manipulation of exchange rates. Successful graduates of the course will acquire skills mainly in: - analysis of the effects of international politics and economics, - critical assessment of scientific readings in international macroeconomics, - elaboration of an individual scientific paper. Successful graduates of the course will acquire competences mainly in: - identification of knowledge niche in the current state of research in international macroeconomics, - critical assessment of the impacts of current trends such as globalization, integration, or climate change on the local economy, - design of development strategies while taking into account foreign flows of trade, labor, capital and current trends.	
Indicative content: During the course, the following effects will be demonstrated using theoretical models:	

- Effects of international flows of goods, services, labor and capital on aggregate product, relative cost of labor and capital.
- Effects of anti-import and pro-export policy on domestic demand and supply (product and prices).
- Effects of international trade agreements.
- Effects of globalization on changing supply and demand.
- Effects of climate change on aggregate product and prices, mobility of factors.

Syllabus:

- Introduction, Theories of Comparative Advantages + Critique.
- Standard Trade Model, Hecksher-Ohlin Model.
- Offshoring.
- Factor Mobility.
- Tariffs and Export Subsidies.
- Trade Agreements.
- Globalization.
- Environmental Migration.

DESCRIPTION OF COURSE

University: University of Economics in Bratislava	
Faculty: Faculty of Commerce	
Course code: KMO OF/OOB21106/21	Title of course: Methodology of Scientific Work
Type, load and method of teaching activities: Form of course: Lecture Recommended load of course (number of lessons): Per week: Per course: 16s Method of study: present	
Number of credits: 10	
Recommended semester/trimester of study: 1.	
Degree of study: III.	
Prerequisites:	
Requirements to complete the course: 20% assignments (2 assignments x 10 points), 20% written exam, 60% final paper	
Student workload: Total study load (in hours): 260 hours (10 ECTS x 26 hours) Lectures and seminar participation: 32 hours Preparation for lectures and seminars: 32 hours Written homework assignments: 37 hours Elaboration of final paper: 90 hours Preparation for written exam: 67 hours Consultation regarding final paper: 2 hours	
Teaching results: The successful graduate of the course will acquire knowledge mainly about: <ul style="list-style-type: none"> - the structure of a scientific article and a final thesis in economics with particular focus on international business, as well as the standard content of their individual parts, - principles of elaboration of a scientific article and a final thesis in economics, i.e., in international business, - work with scientific literature and creation of structured reviews of literature, - creation of research design and interpretation of results, - logistic regression and sophisticated regression models such as spatial Durbin models, - qualitative and quantitative approaches to solving the research question in the field of international business. Successful graduates of the course will acquire skills mainly in: <ul style="list-style-type: none"> - application of acquired knowledge while drafting own scientific papers, - critical assessment of scientific papers of peers in the field of international business in particular, and economics in general, - application of sophisticated methods in scientific work such as spatial analysis and logistic regression, - effective reading of scientific work and creation of structured reviews of literature, - fast reading of scientific articles and efficient creation of literature reviews, 	

- analytical work in statistical software Matlab and Stata.

Successful graduates of the course will acquire competences mainly in:

- presentation of own scientific work in front of the peers at academic for a,
- building of own research profile in academic social networks,
- argumentation in scientific group discussions,
- science dissemination.

Indicative content:

The class content is aligned with the structure of a final PhD thesis and contains the following parts:

- Literature review and formulating a research question, determining the aims.
- Selection of variables and determining the sample.
- Methodological approach to the research question both quantitative- and qualitative-wise.
- Summary of research results and their visualization.
- Discussion with the results and robustness checks.
- Concluding remarks.

The students will get acquainted via study and analysis of papers published in frontline international scientific journals with content of individual parts of a scientific paper (introduction, abstract, literature review, aims, methodology, results, discussion, conclusion) and will critically assess the parts using the selected papers.

DESCRIPTION OF COURSE

University: University of Economics in Bratislava	
Faculty: Faculty of Commerce	
Course code: KMO OF/OOB21110/21	Title of course: Quantitative Methods in Empirical Research
Type, load and method of teaching activities: Form of course: Lecture Recommended load of course (number of lessons): Per week: Per course: 16s Method of study: present	
Number of credits: 10	
Recommended semester/trimester of study: 3.	
Degree of study: III.	
Prerequisites:	
Requirements to complete the course: 40 % assignments (2 assignments x 20 points); 60 % final paper	
Student workload: Lectures and seminar participation: 16 hours Preparation for seminars: 32 hours Written assignments: 32 hours Final paper preparation: 158 hours Preparation of presentation and presentation itself: 20 hours Consultation for final paper: 2 hours	
Teaching results: In particular, students acquire the following abilities: - principles for the formulation and specification of different types of econometric models, - overview of the main methods of analysis of cross-sectional data, time series and models with discrete dependent variable, - approaches to the specification, estimation and diagnosis of these econometric models. Students acquire in particular the following skills: - ability to apply research methods to specific problems using suitable software. Students will acquire the following competencies: - the ability to correctly select the appropriate econometric method for a research problem, - identify potential violations of model assumptions and propose a solution to handle them, - correctly interpret the results of econometric models.	
Indicative content: <ul style="list-style-type: none"> • Estimation, asymptotic properties and diagnostics of regression models. • Autocorrelation – identification, testing and solutions. • Heteroskedasticity – identification, testing and solutions. • Qualitative regressors, model specification and testing. • Time series – basic model specification, Box-Jenkins methodology, ARIMA. • Stationarity of time series and its testing, stationarization of time series. • Cointegration a Granger causality. • Models with a discrete dependent variable.

Syllabus:

- Regression repertorium, model assumptions, asymptotic properties and diagnostics.
- The most common problems of econometric models – autocorrelation, consequences and solutions.
- The most common problems of econometric models – heteroskedasticity, consequences and solutions. Method of weighted least squares, robust estimates.
- Qualitative regressors, model specification and testing.
- Time series, trends and seasonality. ARIMA models, specification and estimation.
- Time series stationarity, testing of unit roots in time series and panel data, problem of spurious regression.
- Cointegration and error-correction models. Granger causality.
- Models with discrete dependent variable.

DESCRIPTION OF COURSE

University: University of Economics in Bratislava	
Faculty: Faculty of Commerce	
Course code: KMO OF/OOB21113/21	Title of course: Trade Operations in International Business
Type, load and method of teaching activities: Form of course: Lecture Recommended load of course (number of lessons): Per week: Per course: 16s Method of study: present	
Number of credits: 10	
Recommended semester/trimester of study: 3.	
Degree of study: III.	
Prerequisites:	
Requirements to complete the course: - Active participation in discussion within the consultations – 10% - Elaboration of the semestral work with a content leading to the topic of the dissertation thesis – 30 % - Semestral work defense within the final professional colloquium – 60%	
Student workload: Workload: 260 hours Participation in consultations: 16 hours Preparation for consultations: 26 hours Elaboration of the semestral work with a content leading to the topic of the dissertation thesis: 78 hours Preparation for exam in the form of the semestral work defense within the final professional colloquium: 156 hours	
Teaching results: Students will obtain following knowledge: - ability to understand the issues of trade operations in international business, - the overview, categorization and regulation of trade operations in international business, - contractual provision of various forms and specifications of trade operations used in international business. Upon successful finishing of the course, students will acquire the following competencies: - interpret knowledge in practice with regard to the conditions of international trade operations in international business, - communicate at the required level within the assigned work team, - implement business operations and create new strategies for further development of the use of business operations in a changing international business, - evaluate the acquired theoretical knowledge and innovations in the field and propose new methods and forms of trade operations in a rapidly changing international business, - lead a discussion in the field of proposed new methods and forms of trade operations in the circle of experts on the given issue. Upon successful finishing of the course, students will acquire the following skills: - use all the acquired knowledge in performing unpredictable tasks and solving various	

problems in the field of business operations in international business,
- present the achieved results of research in the field of trade operations in international business to the professional public,
- discuss and defend their opinions before the general professionals in the field of research results achieved,
- plan the development in the field of international trade operations in the context of new scientific-technical knowledge.

Indicative content:

- Classification and regulation of international trade operations and new trends in international trade operations.
- International trade operations with goods affected by current development trends.
- International trade operations with goods using intermediary relations.
- International trade operations in the field of services.
- International trade operations in the field of tourist industry.
- International trade operations with intellectual property.
- International trade operations in offshore business.
- Fairs and exhibitions in the international business.
