Syllabus:

Seminars:

1. Introduction to the course. Introduction to the philosophy of the processing a case study and the conditions for obtaining the semester evaluation.
2. Comparison of various consumer organizations and their scope. Selection of a specific subject for the presentation of positive and negative experiences.
3. Presentation of the selection of the business entity in the connection to which the case study will be carried out.
4. Continuous presentation of basic knowledge, discussion, observations
5. Continuous presentation of knowledge, discussion, observations. Comparison of EU and Slovak consumer protection in theory and in practice
6. Ongoing presentation of knowledge, discussion, observations, concept 4 C, customer care

7. Ongoing presentation of findings, discussion, plenary observations. Trends in consumption and sustainable consumption
8. Continuous presentation of knowledge, discussion, observations.
9. Field work - evaluation of acquired observations, their presentation. Continuous presentation of knowledge, discussion, observations. Consumer-citizen network
10. Continuous presentation of knowledge, discussion, observations. Contradictions of consumer theories and realities
11. Continuous presentation of knowledge, discussion, observations. Consumer education
12. Evaluation of the fulfillment of the criteria
13. Evaluation of the fulfillment of criteria and completion by evaluation of the semester assignment.

DESCRIPTION OF COURSE

University: University of Economics in Bratislava	
Faculty: Faculty of Business Economics with seat in Košice	
Course code: KFRP PHF/PPF22114/22	Title of course: Corporate Risk Management
Type, load and method of teaching activities: Form of course: Lecture / Practical Recommended load of course (number of lessons): Per week: 2 / 2 Per course: 26 / 26 Method of study: present	
Number of credits: 5	
Recommended semester/trimester of study: 2.	
Degree of study: II.	
Prerequisites:	
Requirements to complete the course: Midterm written exams Final written exam Midterm evaluation: midterm written exams - 40% of course (total points 40) Minimal points required to pass midterm written exams are 21 points (out of 40 points). Final written exam: final written exam - 60% of course (total points 60) Minimal points required to pass final written exams are 31 points.	
Student workload: 26 hours of participation in lectures – 26 hours 13 hours preparation for lectures – 13 hours 26 hours of participation in seminars – 26 hours 13 hours preparation for seminars – 13 hours 26 hours preparation for midterm written exams – 26 hours 26 hours preparation for the final exam – 26 hours Total: 130 hours	
Teaching results: The aim of the course is to provide comprehensive concepts of risk management in companies for students. The course provides an overview and interpretation of tools to understand and master the theoretical and practical knowledge related to the identification, analysis, measurement, and assessment of risk. The course also focuses on use of new methods and tools of risk management for selection of appropriate strategies. Knowledge: The graduate will gain knowledge about corporate risk management. The knowledge covers development of risk management concepts, methods of risk identification and analysis, as well as models for risk measurement and risk assessment. Case studies analyses helps graduate to understand the basic strategies of risk management. Skill: The graduate will be able to create economic models using spreadsheets and apply mathematical and statistical tools to business processes. Skillset also encompasses mastering the probability theory	

and uncertainty estimation. Other abilities include identification, measurement, and assessment and management of corporate risks.

Competence:

The graduate will master the rules and procedures of creating economic models with elements of uncertainty and risk. They will master the process of design and assessment of economic models and simulations. The graduate will be able to provide recommendation for the transfer, reduction and elimination of risks and other economic problems.

Indicative content:

Lectures:

Introduction to probability theory

Basic concepts of risk

Risk classification

Identification of risks in the company

Risk analysis

Risk assessment

Selection of risk variants

Risk management

Tree diagrams

Expert methods of risk assessment

Monte Carlo simulation

Methods of risk treatment

Other methods of risk reduction

Seminars:

Introduction to probability theory. Classical definition of probability.

Probability of Multiple Random Variables. Joint and union probability, probability of dependent and independent phenomena.

Conditional probability, Bayes' theorem.

Discrete random variable. Discrete distributions and their application in risk analysis.

Continuous random variable. Continuous distributions and their application in risk analysis.

Midterm exams I.

Use of MS Excel for economic analysis.

Creation of models using MS Excel.

Sensitivity analysis using MS Excel.

Scenario planning using MS Excel.

Monte Carlo simulation. Monte Carlo simulation procedure. Monte Carlo simulation in MS Excel.

Rules of decision-making in conditions of risk. Case Study I: Risk assessments using descriptive characteristics: percentiles, median, mode, skewness, sharpness.

Midterm exam II.

Support literature:

Elementary literature:

DESCRIPTION OF COURSE

University: University of Economics in Bratislava	
Faculty: Faculty of Business Economics with seat in Košice	
Course code: KEM PHF/ PPEM22141/22	Title of course: Digital Economy
Type, load and method of teaching activities: Form of course: Lecture / Practical Recommended load of course (number of lessons): Per week: 2 / 2 Per course: 26 / 26 Method of study: present	
Number of credits: 4	
Recommended semester/trimester of study: 2.	
Degree of study: II.	
Prerequisites:	
Requirements to complete the course: Midterm written assignment Final written exam Midterm evaluation: Midterm written assignment: 40% of course (total points 40) Minimal points required to pass midterm written assignment are 21 points (out of 40 points) Final written exam: Final written exam 60% of course - 60 points Minimal points required to pass final written exams are 31 points	
Student workload: 104 hours in total, of which: <ul style="list-style-type: none">• 26 hours of participation in lectures• 13 hours preparation for lectures• 26 hours of participation in seminars• 13 hours preparation for seminars• 13 hours preparation for midterm written assignment• 13 hours preparation for the final exam	
Teaching results: Knowledge: <ul style="list-style-type: none">• Knowledge of the digital economy• Knowledge of B2B and B2C platforms• Knowledge of trust building mechanisms and building reputation in electronic markets• Knowledge of the basic tools of datamining and extraction of information from data• Knowledge of security, privacy and GDPR in the digital environment. Competences: <ul style="list-style-type: none">• Orientation in different types of electronic markets• Operating in the environment of B2B and B2C trading platforms• Evaluate business data using database and basic data mining tools.• Evaluate the trustworthiness of business partners and building trustworthiness in electronic markets	

- Introduce digital innovation in enterprises
- Management of Business Intelligence systems in the company

Skills:

- Buying and selling on electronic markets using B2B and B2C platforms,
- Adjusting the settings in the functionalities of market platforms
- Creation and parameterization of electronic product lists and electronic catalogues
- Reporting, control and management of Business Intelligence systems
- Creating a strategy for building reputation in electronic markets.

Indicative content:

Lectures:

1. Nature of Data and data collection.
2. Data analytics.
3. Digitalization of economy.
4. Digital goods and services.
5. B2B Platforms.
6. Digital Markets.
7. Trust building mechanism.
8. Reputation on the Internet.
9. Digital business, strategy, and innovation.
10. Business Intelligence.
11. Introduction to Datamining.
12. Datamining methods.
13. Security, privacy and GDPR.

Seminars:

1. Selected case studies and examples related to data types.
2. Selected case studies and examples related to data preparation.
3. Selected case studies and examples related to visualization multivariable datasets.
4. Selected case studies and examples related to data analytics.
5. Selected case studies and examples related to preparation of electronic auction.
6. Selected case studies and examples related to realisation of electronic auction.
7. Selected case studies and examples related to evaluation of electronic auction.
8. Selected case studies and examples related to evaluation of reputation mechanisms.
9. Selected case studies and examples related to basic datamining methods I (e.g. basic classification trees).
10. Selected case studies and examples related to basic datamining methods II (e.g. simple neural network modelling).
11. Selected case studies and examples related to basic datamining methods II (e.g. simple neural network training).
12. Selected case studies and examples related to basic datamining methods II (e.g. simple neural network validating).
13. Midterm assignment.

Support literature:

DESCRIPTION OF COURSE

University: University of Economics in Bratislava	
Faculty: Faculty of Business Economics with seat in Košice	
Course code: KOP PHF/PPO22318/22	Title of course: Digital Marketing
Type, load and method of teaching activities: Form of course: Lecture / Practical Recommended load of course (number of lessons): Per week: 0 / 2 Per course: 0 / 26 Method of study: present	
Number of credits: 3	
Recommended semester/trimester of study: 3.	
Degree of study: II.	
Prerequisites:	
Requirements to complete the course: Classification per course: 100% practice lessons evaluation – 30% (semestral task – 15%, test – 15%) exam: 70% (written form) Total: practice lessons + exam, required minimum of 51% for sufficient classification and simultaneously minimum of 51% from exam.	
Student workload: participation in active forms - 26 hours preparation for active forms - 26 hours preparation for the final exam - 26 hours Total: 78 hours	
Teaching results: The objective of the course is to apply the acquired skills in the use of current digital technologies in marketing and business, to select appropriate means, to determine the strategy for the use of ICT in terms of various priorities. Knowledge: The focus is on the practical implementation of a digital data marketing project as a technical solution. Skill: Students are able to choose a suitable technical communication platform, identify, define and analyze data protection risks, including the necessary mobility, network environment and cybercrime and evaluate the success of selected means of digital marketing. Competence: Students should know how to determine the communication strategy of a specific marketing campaign, design procedures for evaluating the obtained customer information.	
Indicative content: Seminars: 1. Managerial understanding of the use of current multimedia in marketing and business of the company with a focus on competitiveness and visibility. Definition and reminder of basic terms in relation to the customer, respectively. audience. 2. Identification and specification of the selection and applicability of digital marketing elements. Preparation for the elaboration of a semester project within the taught subject. 3. The most used typologies of strategies for digital marketing - examples of implemented campaigns from practice. Selection of a strategy for implementation in a semester project.	

4. The role of multimedia in digital marketing. Identification of key digital media suitable for a semester project with emphasis on the use of digital marketing in the online space.
5. Vision, goals and message of digital marketing strategy. Practical examples of implemented strategies in practice.
6. Search Engine Marketing and its role in the design part of the company's digital marketing strategy. Relationships between Search Engine Marketing and Search Engine Optimization. Methods of adapting the marketing strategy for visibility in the online space.
7. Video as a part of the presentation of digital marketing company - examples from practice. The primary and secondary role of video in digital marketing strategy, and its applicability depending on the form, phase, value path.
8. Social media and social networks as an element of digital marketing of society. Opportunities and threats arising from the use of social networks as the primary tool of digital marketing. Application of selected tools within social media and social networks for a semester project.
9. Ongoing evaluation. Identification of the suitability of the use of mobile marketing as an element of digital marketing. Technical limitations in use. Applicability to various products - practical examples. Discussion on the possibilities of using mobile marketing in connection with the solved semester project.
10. The most commonly used analytical procedures for digital marketing. The appropriateness of measuring the campaign as part of the strategy - setting KPIs using SMART goals and the customer's value path. Procedures for evaluating the effectiveness of digital marketing tools and company strategy.
11. Digitization of society. Analysis of opportunities and threats arising from digitization. Virtual reality and augmented reality as modern tools of digital marketing. Demonstration of practical examples.
12. IoT and IoE as part of the company's digital marketing strategy. Presentation of the company's digital image, placement options, protection of sensitive data. Presentation of semester projects.
13. Presentation of semester projects. Semester evaluation. Feedback from listeners.

DESCRIPTION OF COURSE

University: University of Economics in Bratislava	
Faculty: Faculty of Business Economics with seat in Košice	
Course code: KOP PHF/PPO22311/22	Title of course: Distribution Management
Type, load and method of teaching activities: Form of course: Lecture / Practical Recommended load of course (number of lessons): Per week: 2 / 2 Per course: 26 / 26 Method of study: present	
Number of credits: 4	
Recommended semester/trimester of study: 4.	
Degree of study: II.	
Prerequisites: KOP PHF/PPO22300/22-Retail Managemet	
Requirements to complete the course: Semester assignment, Continuous tests Exam <ul style="list-style-type: none">• Elaboration and presentation of the semester assignment - 20%• Result of the continuous assessment tests - 20%• Exam - 60%	
Student workload: Participation in lectures – 26 hours Participation in active forms - 26 hours Processing of semester assignment - 13 hours Preparation for continuous assessment test – 13 hours Preparation for the exam - 26 hours Total: 104 hours	
Teaching results: The aim of the course is to specify the concept of distribution management reflecting strategic marketing aspects, as well as to analyze the possibilities of corporate distribution policy, relationships between distribution and other marketing tools, creating and managing distribution channels and networks with respect to requirements and real parameters, criteria, and methods. Knowledge: Students acquire basic theoretical knowledge of the principles, concepts, procedures, and strategies of distribution management, which include the analysis of marketing channels and can summarize, classify, and organize the processes in distribution. Skill: Students can apply the acquired knowledge in solving problems in distribution, illustrate the interrelationships and assess the impact of alternative solutions, discuss the design of distribution structures and explain the importance of distribution planning and the role of intermediaries. Competence: From the acquired theoretical knowledge, students can systematize their knowledge in the field of distribution management in relation to the requirements of business practice. They can recognize, apply, and explain the functions of distribution, its relationships to other marketing tools.	
Indicative content: Lectures: <ol style="list-style-type: none">1. Introduction to distribution management2. Distribution entities, distribution functions, distribution channels.	

3. Classification of distribution space elements.
4. Modeling of distribution networks.
5. Distribution problem, transport tasks.
6. Distribution channel systems
7. Development and management of the distribution channel
8. Importance of product and price in channel management
9. Marketing channels and e-commerce
10. Transport systems, transport and transportation.
11. Warehouse design, technical means and innovations in packaging technology.
12. Logistics costs in distribution, last mile delivery costs
13. Distribution controlling

Seminars:

1. Introductory seminar, getting acquainted with the organization of work in seminars and with the conditions of continuous and overall evaluation. Introduction to the issue – Distribution Management.
2. Distribution management, Distribution - discussion.
3. Distribution policy - assignment, work in groups.
4. Distribution entities, distribution channels and classification of distribution space elements - assignment, work in groups.
5. Distribution problem - modeling.
6. Distribution problem - modeling.
7. Testing 1.
8. Testing 1 - Evaluation, the most common errors in models. Distribution channels - assignment, work in groups.
9. Transport systems - problem solving.
10. Transport systems - solving tasks.
11. Social relations in distribution - assignment, discussion, work in groups.
12. Testing 2.
13. Evaluation of the semester. Compliance check, corrective interim evaluations

DESCRIPTION OF COURSE

University: University of Economics in Bratislava	
Faculty: Faculty of Business Economics with seat in Košice	
Course code: KEM PHF/ PPEM22604/22	Title of course: Environmental Economics
Type, load and method of teaching activities: Form of course: Lecture / Practical Recommended load of course (number of lessons): Per week: 2 / 2 Per course: 26 / 26 Method of study: present	
Number of credits: 4	
Recommended semester/trimester of study: 2.	
Degree of study: II.	
Prerequisites:	
Requirements to complete the course: Preliminary evaluation 40%: 20% - activities in the e-learning course - online form according to the tasks /in the e-learning course/ 20% - evaluation of the semester work - by completing the activity in the e-learning course - online form according to the tasks/in the e-learning course/ 60% - evaluation of the final written examination - test / in an e-learning course /	
Student workload: attendance at lectures: 26 hours participation in seminars: 26 hours preparation for seminars: 13 hours elaboration of semester work: 13 hours preparation for the exam: 26 hours Total load: 104 hours	
Teaching results: The course deals with the definition of the relationship between man and the environment (environment), understanding the environment as an asset, the criteria of efficiency of environmental use. It discusses the impacts of individual activities on the environment and defines the impact of the company on the environment. It also deals with the concept of sustainable development, the consequences of environmental degradation, their quantification, economic instruments of environmental policy for individual components of the environment. We will also discuss the liability of entities in violation of environmental protection. We will focus mainly on the financial and economic aspects of the issue and the economic context of environmental regulation. Knowledge: control of the theoretical apparatus for the study of environmental economics, knowledge of the rational use of natural resources, knowledge of the evaluation of approaches to quality of life using environmental indicators, knowledge of the impact of production and consumption on the environment, knowledge of payments for the use of resources and for environmental pollution, knowledge of environmental policy instruments and their use in the conditions of Slovakia and European union,	

knowledge of the possibilities of financing environmental activities from public sources, ability to understand and explain current environmental problems.

Competence:

at the theoretical level, the student will gain the necessary knowledge about the effects of individual economic activities on the environment and the use of economic instruments of environmental policy. Practical skills - the student applies the acquired theoretical knowledge to solve specific problems.

Skill:

orientation in the structure of environmental policy instruments, in the possibilities of financing environmental activities, orientation in the position and impacts of individual sectors and activities on the environment, access to information sources from environmental databases, EEA, OECD, UN, orientation in environmental databases SR, EU, databases and UN reports, country environmental performance indexes.

Indicative content:

Lectures:

The current state and tendency of development of natural resources in the world, the relationship between value and price, the basic principles of valuing natural resources.

Relationships between man and the environment, economic system and natural system, reproductive process and its impact on the environment. Basic concepts and their characteristics in the field of environmental economics.

Environmental degradation and its consequences, stages of development and impacts of production and consumption on the environment.

Quality of life. Measurable indicators. EPI index.

Externalities in the operation of the environment, the optimum quality of the environment at the macro and micro level.

Environmental policy instruments - normative and free.

Environmental policy instruments - direct and indirect instruments. Economic instruments

Company approaches to environmental protection, development of approaches, technical and non-technical approaches.

Voluntary environmental policy instruments.

Economic instruments in the environmental policy of the Slovakia - selected component of the environment.

Economic instruments in the environmental policy of Slovakia - selected component of the environment (air, trading in emission rights and permits).

Quantification of economic damage to the environment - selected problem, methods, techniques of quantification of impacts on selected components of the environment.

Possibilities of financing environmental projects. Selected aspects of the problem. Environmental business economics.

Seminars:

Current state and tendency of development of prices of selected natural resources (oil, coal, natural gas, energy).

Causes and consequences of the negative development of relations in the environment. Human-environmental relations.

Environmental - environmental information. Information systems. Indicators.

Quality of life, economic and environmental indicators.

Impact of production and consumption on the environment. Impact of industry on the environment.

The impact of agriculture on the environment.

Impact of energy on the environment. Impact of transport on the environment. Impact of tourism on the environment.

The state of environmental components in the Slovak Republic and problem areas. Environmental regionalization of the Slovak Republic.
Economic instruments in the environmental policy of the Slovak Republic in air protection.
Economic instruments in the environmental policy of the Slovak Republic in water management.
Economic instruments in the environmental policy of the Slovak Republic in soil protection and in the circular economy.
Possibilities of financing environmental activities from public sources
Selected financing instruments in the environmental field at the enterprise level.
Current environmental problems and possible solutions.

Number of credits: 4	
Recommended semester/trimester of study: 2.	
Degree of study: II.	
Prerequisites:	
Requirements to complete the course: In accordance with the focus of the field, the student completes an internship, which must be in the economic field. The rules for the recognition of internships of PHF EU students are developed in accordance with the EU Study Regulations in Bratislava. Place of internship, arrangement of internship, agreement on internship, remuneration for work during internship, conditions of internship, etc. students agree individually. Implementation of the internship is recommended in the form of pre-diploma internship focused on the elaboration of a diploma thesis, obtaining documents, consultations with experts, etc. - 100 %	
Student workload: 104 hours total	
Teaching results: The main goal of the course is to ensure the connection of theoretical and practical part of the study and at the same time to enable students to solve their future employment during their studies so that they have the opportunity to demonstrate to employers at least partial practical experience. Knowledge: <ul style="list-style-type: none"> • ability to identify practical problems related to the field of study, • understand the practical knowledge related to the field of study. Skill: <ul style="list-style-type: none"> • apply the acquired practical knowledge to solve a specific problem. Competence: <ul style="list-style-type: none"> • summarize the experience gained related to the field of study, • categorize the experience gained related to the field of study. 	
Indicative content: Linking economic study and practice, the student has the opportunity to gain practical experience related to the topic of the final thesis.	
Support literature: None	
Syllabus: Linking economic study and practice, the student has the opportunity to gain practical experience related to the topic of the final thesis.

DESCRIPTION OF COURSE

University: University of Economics in Bratislava	
Faculty: Faculty of Business Economics with seat in Košice	
Course code: KEM PHF/ PPEM22605/22	Title of course: Forensic Accounting
Type, load and method of teaching activities: Form of course: Lecture / Practical Recommended load of course (number of lessons): Per week: 2 / 2 Per course: 26 / 26 Method of study: present	
Number of credits: 4	
Recommended semester/trimester of study: 1.	
Degree of study: II.	
Prerequisites:	
Requirements to complete the course: active participation in seminars in groups, partial written tests written exam Continuous assessment 40 %: · active participation in seminars in groups – 10 % · partial written tests – 30 % Final assessment: · written exam – 60 %	
Student workload: · participation in lectures – 26 hrs. · participation in seminars – 26 hrs. · preparation for seminars – 7 hrs. · preparation for partial written tests – 15 hrs. · preparation for written exam – 30 hrs. Total: 104 hrs.	
Teaching results: The aim of the course is to provide students with a basis for understanding the role of forensic accounting in economic decision-making, financial reporting, and investigative processes. Within the course, students will gain basic information in the areas of identification, analysis, and qualification of misleading trends in accounting. The course will offer knowledge to understand the various possibilities of unethical use of accounting for various reasons and motives. In addition, the course combines traditional (legal) and misleading accounting procedures, presents schemes of misleading procedures, their manifestations in the financial statements and, in connection with that, the process of investigating suspicious practices with the introduction of analytical methods and procedures. The subject shapes the ethical perception of students and the responsibility for the precise implementation of the practice of economist - accountant. Knowledge: · to know the basic categories of forensic accounting with the creation of preconditions for their possible subsequent more detailed development within a deeper study of forensic disciplines, · to understand the interrelationships of the elements of the context of misleading in accounting,	

- to know the nature of fraud and the possibilities of their prevention,
- to be familiar with the usual schemes of misleading accounting practices that affect the financial statements,
- to understand the principles and basic forensic accounting analysis,
- to understand the basic investigative procedures in forensic accounting,
- to master ethical principles in resolving ethical conflicts.

Skills:

- to analyze the basic context in forensic accounting,
- to analyze the financial statements in order to identify misleading practices,
- to identify potentially fraudulent situations,
- to evaluate critically the causes, circumstances and consequences of questionable accounting procedures,
- to apply basic concepts of forensic accounting in practice,
- to develop curiosity in detecting unusual phenomena and their causes,
- to examine details in accounting,
- to apply ethical approaches in the practice of accounting professionals.

Competences:

- the ability to make decisions and think critically about ethical dilemmas in accounting,
- to implement teamwork in managing the challenges related to forensic accounting methods and processes,
- the ability to achieve personal integrity in distinguishing between acceptable and unacceptable accounting practices.

Indicative content:

Lectures:

1. The essence of forensic accounting. History and reasons.
2. Creativity and fraud in financial reporting.
3. Accounting data distortion practices.
4. Anatomy of misleading accounting procedures – assets, liabilities.
5. Anatomy of misleading accounting procedures – costs, revenues.
6. Financial statements – red flags.
7. Quantitative methods of data distortion detection.
8. Qualitative methods of data distortion detection.
9. The process of investigating the misleading in accounting.
10. Methods and techniques of investigating the misleading in accounting.
11. Economic, legal and psychological aspects of fraud. The triangle of fraud - opportunity, motivation, rationalization.
12. Prevention of fraudulent conduct in financial reporting. Accounting ethics.
13. Economic impacts of fraudulent conduct in financial reporting – an expert's view from practice.

Seminars:

1. Introductory seminar. Course syllabus, requirements for meeting the conditions of the active form of teaching. Summary of basic accounting knowledge.
2. Accounting scandals – discussion.
3. Financial statements – analysis of financial statements.
4. Manipulation of accounting data – selected accounting procedures – assets, liabilities.
5. Manipulation of accounting data – selected accounting procedures – costs, revenues.
6. Evaluation of financial statements – case studies. Partial written test.
7. Quantitative methods of data distortion detection – case study.
8. Qualitative methods of data distortion detection – case study.
9. The process of investigating the misleading in accounting – model situations.
10. Application of methods and techniques of investigation of the misleading in accounting.

11. Testing the quality of financial statements.
12. The current situation in the economic environment as an opportunity to use misleading practices in accounting. Partial written test.
13. Effective control system in companies – discussion.

DESCRIPTION OF COURSE

University: University of Economics in Bratislava	
Faculty: Faculty of Business Economics with seat in Košice	
Course code: KKM PHF/PPK22574/22	Title of course: Game Theory
Type, load and method of teaching activities: Form of course: Lecture / Practical Recommended load of course (number of lessons): Per week: 2 / 2 Per course: 26 / 26 Method of study: present	
Number of credits: 4	
Recommended semester/trimester of study: 1.	
Degree of study: II.	
Prerequisites:	
Requirements to complete the course: project, test written exam <ul style="list-style-type: none"> • project – 20 % • test – 20 % • written exam – 60 % 	
Student workload: <ul style="list-style-type: none"> • participation in lectures - 26 hours • participation in exercises - 26 hours • preparation for exercises - 10 hours • preparation for the semester test - 10 hours • project processing - 10 hours • preparation for the exam - 22 hours Total: 104 hours	
Teaching results: The aim of the course is to provide students with basic knowledge of game theory. The student will gain an overview of the basic types of games that can be applied to real situations, he will be able to find optimal strategies in various decision-making situations, whether it will be a situation corresponding to non-cooperative games or cooperative games, in which he also learns to work in team. Students will also practice the connection of game theory with real situations in voting games, where it is important to know which coalitions are advantageous and why. The student will get acquainted with the basic models of the market and with the basic types of auctions. Knowledge: At the theoretical level student has the necessary knowledge of the basic definitions of game theory, he knows ways to find optimal strategies, methods how to solve matrix and bimatrix games, he has an overview of possible solutions in situations corresponding to decision-making for risks and uncertainties, he knows definitions and principles of non-cooperative and cooperative games and has knowledge of coalition formation, the basic market models and the basic types of auctions. Skills: The student is able to apply the concepts of game theory to real situations, to solve basic types of games, to find the optimal solution of matrix games, non-cooperative and cooperative games. He is	

able to decide in situations corresponding to games against nature. The student's ability to work in a team will be used in solving cooperative games and creating coalitions.

Competences:

After completing the course, student has basic knowledge of game theory and their use in solving specific tasks, especially those of an economic nature, which he demonstrates by the project developing and its subsequent presentation. Student is able to apply the gained knowledge in real situations such as the selection of a suitable partner in the company, the selection of a suitable location for the company or the selection of a suitable strategy for the competition fight on the market.

Indicative content:

Lectures:

1. Basic concepts of modeling conflict situations.
2. Games in normal form, games in extensive form, non-conflict decision situations.
3. Two player games. Definition of antagonistic conflict. Matrix games and methods of their solution. Optimal player strategies, their existence and properties. Fictitious game method, dominance in matrix games.
4. Bimatrix games.
5. Endless antagonistic conflicts - finding a balanced strategy of the game.
6. Von Neumann-Morgenstern utility function.
7. Decision making for risks and uncertainties. Games against nature.
8. Non-cooperative games n players. Equilibrium points in pure and mixed strategies. Optimal decision making in non-cooperative games.
9. Cooperative games n players. Coalitions and their characteristic functions. The core of the game. Shapley's value of the game.
10. Voting games. Shapley force index. Banzhaf's strength index. Coalition formation theory.
11. Market models in game theory. Monopoly, duopoly, oligopoly.
12. Introduction to auction theory.
13. Applications of game theory in the economic environment, paradoxes of economic laws.

Seminars:

1. Basic concepts of modeling conflict situations.
2. Games in normal form, games in extensive form, non-conflict decision situations.
3. Two player games. Definition of antagonistic conflict. Matrix games and methods of their solution. Optimal player strategies, their existence and properties. Fictitious game method, dominance in matrix games.
4. Bimatrix games.
5. Endless antagonistic conflicts - finding a balanced strategy of the game.
6. Von Neumann-Morgenstern utility function.
7. Decision making for risks and uncertainties. Games against nature.
8. Non-cooperative games n players. Equilibrium points in pure and mixed strategies. Optimal decision making in non-cooperative games.
9. Cooperative games n players. Coalitions and their characteristic functions. The core of the game. Shapley's value of the game.
10. Voting games. Shapley force index. Banzhaf's strength index. Coalition formation theory.
11. Test.

DESCRIPTION OF COURSE

University: University of Economics in Bratislava	
Faculty: Faculty of Business Economics with seat in Košice	
Course code: KOP PHF/PPO22310/22	Title of course: Green Marketing
Type, load and method of teaching activities: Form of course: Lecture / Practical Recommended load of course (number of lessons): Per week: 2 / 2 Per course: 26 / 26 Method of study: present	
Number of credits: 4	
Recommended semester/trimester of study: 2.	
Degree of study: II.	
Prerequisites: KOP PHF/PPO22303/22-Marketing Management	
Requirements to complete the course: Seminars – total 40 %, of which: written examination – 30 % activity – 10 % Final evaluation: 60 % Exam – total 60 %, of which: Exam: 60 % (elaboration and presentation of individual work / project - 20 %, written and oral part of the exam - 40 %) Total: 100 %	
Student workload: lectures: 26 hours exercises: 26 hours project preparation: 13 hours preparation for the written test: 13 hours preparation for the final exam: 26 hours Total: 104 hours	
Teaching results: The aim of the course is to identify the relationship between sustainable development as one of the priorities of government policy and business. Knowledge: Upon successful completion of this course, students will gain knowledge and practical implications in green marketing, which combines two opposing directions: achieving economic growth and positive economic results in the context of sustainable development, applying an ethical approach to business with respect for environmental protection as a new dimension of consumer orientation. Competence: By completing the course, students will acquire competencies in the field of the critical thinking in working with the information, in generating relevant outputs of analysis and presentation of results. The aim is to achieve a high degree of independence and foresight with the application of innovative and creative thinking with an emphasis on sustainable development supported by the presentation of the results of their own study. Skills: Regardless of the form of the case study, students will benefit from in-depth discussions and practical solutions that result from learning using case the study methods. Using applied teaching methods, students will acquire	

competencies in areas of implementation of green marketing in business management practice, which they will be able to apply in their future professional career.

Indicative content:

Lectures:

1. Defining green marketing and setting its goals.
2. Characteristics of the principles of corporate social responsibility in the theory of sustainable development.
3. The historical development of green marketing together with the development of consumer expectations from the production and supply of goods and services provided while respecting sustainable development.
4. Development trends in consumer behavior.
5. Product policy and brand management of green marketing.
6. Packaging and reverse logistics in green marketing.
7. Circular economics versus green marketing
8. The problem of "greenwashing".
9. Place policy in green marketing and pricing policy in green marketing.
10. Marketing communication in green marketing.
11. Act on the Backup of Disposable Beverage Packaging, Returnable Plastic and Metal Beverage Packaging
12. Application of green marketing on an example from practice - a lecture by an expert from practice.
13. Summary of knowledge and recommendations in terms of the potential of applying knowledge in economic practice in connection with the implementation of Agenda 2030 in green marketing.

Seminars:

1. Debate about how to apply green marketing in practice. Opportunities and limitations. Assignment of a selection of a semester project.
2. Presentation of projects of case studies of the application of green marketing in selected business management practice.
3. Application of the socially responsible principle in the conditions of the selected entity. Presentation, debate, discussion.
4. Application of the socially responsible principle in the conditions of the selected entity. Presentation, debate, discussion. Evaluation of presentations.
5. Product policy in connection with the determinants of green marketing. Brand management of green marketing. Presentation, debate, discussion. Evaluation of presentations.
6. Packaging and reverse logistics in selected practice.
7. Circular economics versus green marketing. Presentation, discussion, discussion
8. Site policy and reverse logistics in connection with the determinants of green marketing. Presentation, debate, discussion. Evaluation of presentations.
9. Communication mix in connection with the determinants of green marketing. Presentation, debate, discussion. Evaluation of presentations.
10. Field work aimed at collecting positive and negative observations in terms of compliance with the principles of green marketing.
11. Elaboration of a study of the implementation of green marketing in retail practice.
12. Greenwashing and observations from the field, presentation to the audience.
13. Evaluation of activities.

DESCRIPTION OF COURSE

University: University of Economics in Bratislava	
Faculty: Faculty of Business Economics with seat in Košice	
Course code: KFRP PHF/PPF22154/22	Title of course: Purchasing and Supply Management 4.0
Type, load and method of teaching activities: Form of course: Lecture / Practical Recommended load of course (number of lessons): Per week: 2 / 2 Per course: 26 / 26 Method of study: present	
Number of credits: 5	
Recommended semester/trimester of study: 3.	
Degree of study: II.	
Prerequisites: KOP PHF/PPO22302/22-Purchasing and Sale	
Requirements to complete the course: Midterm written assignment. Final written exam Midterm evaluation: Midterm written assignment: 40% of course (total points 40) Minimal points required to pass midterm written assignment are 21 points (out of 40 points) Final written exam: Final written exam 60% of course - 60 points Minimal points required to pass final written exams are 31 points.	
Student workload: 26 h. lectures 26 h. practical 26 h. preparation for practical 30 h. preparation for control tests 22 h. preparation for final exam Total: 130 hours	
Teaching results: The aim of this module-based course for Purchasing and Supply Management (PSM) in Industry 4.0 era is to ensure that individual students are provided with the necessary knowledge and learning to join a PSM department of any size of organization ready to engage in different aspects of purchasing is facing in the (nearby) future. Furthermore, it provides opportunities to ensure that individual students are provided with the necessary skills and competences to improve their competitiveness in the labor market and job situation today and in the future and help them to further develop their professional skills as well as their personalities. An increase in the number of highly skilled students in the area of PSM will foster the development of different solutions for supply chains, logistics, finance and the business environment in general. Knowledge: Understanding Industry 4.0 and strategic digital leadership Understanding supply requirements using data and technology Understanding methods and procedures of sourcing as well as evaluating and selecting suppliers in the digital age	

Advanced automation in operational procurement

Competence:

Strategic management in Purchasing and Supply Management

Data analysis in Purchasing and Supply Management

Robotic process automation in Purchasing and Supply Management

Network management of procurers and suppliers

Ability to evaluating and selecting suppliers in the digital age

Implementation of eProcurement technology

design of methods for monitoring and controlling of business processes.

Skill:

Design and use automation processes in PSM environment.

Implementation of Industry 4.0 tools and techniques in PSM environment.

Analyse Purchasing and Supply Management data to support decision making.

Orientation in eProcurement technology

Digital negotiation

Use of eProcurement technology

Business process improvement

Quality audits realisation

Indicative content:

Lectures:

1. Procurement and sourcing in companies
2. Purchasing and Supply Management
3. Characterization of Industry 4.0 from PSM point of view.
4. Module I.: Strategic digital leadership A.
5. Module I.: Strategic digital leadership B.
6. Module II.: Supply requirements using data and technology A.
7. Module II.: Supply requirements using data and technology B.
8. Module III.: Sourcing and evaluating suppliers in the digital age A.
9. Module III.: Sourcing and evaluating suppliers in the digital age B.
10. Module IV.: Selecting Suppliers A.
11. Module IV.: Selecting Suppliers B.
12. Module V.: Advanced automation in operational procurement A.
13. Module V.: Advanced automation in operational procurement B.

Seminars:

1. Selected case studies and examples related to Purchasing and Supply Management
2. Selected case studies and examples related to Industry 4.0 from PSM point of view.
3. Selected case studies and examples related to Module I.: Strategic digital leadership A.
4. Selected case studies and examples related to Module I.: Strategic digital leadership B.
5. Selected case studies and examples related to Module II.: Supply requirements using data and technology A.
6. Selected case studies and examples related to Module II.: Supply requirements using data and technology B.
7. Selected case studies and examples related to Module III.: Sourcing and evaluating suppliers in the digital age A.
8. Selected case studies and examples related to Module III.: Sourcing and evaluating suppliers in the digital age B.
9. Selected case studies and examples related to Module IV.: Selecting Suppliers A.
10. Selected case studies and examples related to Module IV.: Selecting Suppliers B.
11. Selected case studies and examples related to Module V.: Advanced automation in operational procurement A.

12. Selected case studies and examples related to Module V.: Advanced automation in operational procurement B.
13. Preparation at midterm evaluation

DESCRIPTION OF COURSE

University: University of Economics in Bratislava	
Faculty: Faculty of Business Economics with seat in Košice	
Course code: KKM PHF/PPK22450/22	Title of course: Quantitative Analyzes and Forecasting
Type, load and method of teaching activities: Form of course: Lecture / Practical Recommended load of course (number of lessons): Per week: 2 / 2 Per course: 26 / 26 Method of study: present	
Number of credits: 5	
Recommended semester/trimester of study: 3.	
Degree of study: II.	
Prerequisites: KFRP PHF/PPF22114/22-Corporate Risk Management	
Requirements to complete the course: individual work, written work combined exam <ul style="list-style-type: none"> • written examination – 30 % • semester assignment – 10 % • combined exam – 60 % 	
Student workload: <ul style="list-style-type: none"> • participation in lectures – 26 hours • participation in exercises – 26 hours • preparation for exercises – 13 hours • preparation for the semester test – 26 hours • preparation for the semester assignment – 13 hours • preparation for the exam – 26 hours Total: 130 hours	
Teaching results: The main educational goal of the course is: <ul style="list-style-type: none"> • acquaint students with the principles, knowledge, main goals in the field of quantitative analysis and basic forecasting procedures, • acquaint students with the stages of implementation of quantitative analysis, types of methods and approaches to quantitative analysis and prognosis, • teach students to practically implement relevant analyzes and forecasting methods, • get acquainted with primary and secondary data sources that are suitable for the implementation of analyzes and forecasting in the field of trade and marketing, • gain knowledge about the possibilities of quantitative data processing using software products, • to teach students to correctly draw conclusions from realized analyzes and forecasting methods, • gain an analytical approach to solving economic problems that can applied to the field of economic practice. Knowledge: Successful graduates of the course will gain knowledge of quantitative analysis and basics of prognostic approaches in marketing, primary and secondary data sources for trade and marketing, how to evaluate qualitative and quantitative data, application of software products in processing	

analyzes, drawing conclusions from the implemented analytical procedures, which they can apply in decision-making in various areas of economic practice and will use them appropriately in the study of other subjects and the processing of final theses.

Skill:

The graduate is able to implement, take steps to perform a quantitative analysis in the field of trade and marketing, apply appropriate methods of analysis of qualitative and quantitative data of the primary resp. secondary research, uses a suitable statistical software product in solving analyzes, draws relevant conclusions from the applied quantitative procedures. The student applies the acquired theoretical knowledge to the practical solution of specific problems in the field of quantitative analysis and elementary forecasting.

Competence:

After completing the course the student is able to solve and analyze problems related to the application of one- and multivariate quantitative methods for analysis in marketing and business, assess the context of used quantitative methods, can think analytically, apply creative thinking in obtaining and processing relevant data, can orient in basic databases for the selection of secondary research indicators, to carry out quantitative analysis and evaluate its conclusions, to present conclusions and recommendations for the following periods in an appropriate manner.

Indicative content:

Lectures:

1. Basic and advanced methods of quantitative analysis.
2. Empirical and graphical approaches to the analysis of categorical, ordinal and cardinal features.
3. Advanced approaches to data processing and analysis, problem solving in data processing.
4. Application of inductive statistics, software solutions.
5. Investigation of dependencies of qualitative and quantitative features, software solutions.
6. Linear and nonlinear regression models.
7. Multidimensional regression models.
8. Regression models and their use in forecasting.
9. One-factor and multi-factor analysis of variance.
10. Multifactor analysis of variance, software solutions.
11. Nonparametric analysis of variance.
12. Presentation of results, outputs of software solutions to the tasks of qualitative and quantitative analysis and forecasts.
13. Overview of other approaches to quantitative analysis, software products.

Seminars:

1. Application of appropriate basic and advanced methods of quantitative analysis.
2. Empirical and graphical approaches to the analysis of categorical, ordinal and cardinal features, solving practical cases.
3. Practical approaches to advanced data processing and analysis, problem solving in data processing.
4. Application of inductive statistics, software solutions, practical examples of application of inductive statistics.
5. Investigation of dependencies of qualitative and quantitative features in the software product environment.
6. Linear and nonlinear regression models, examples and possible solutions using a software product.
7. Multidimensional regression models, solving practical problems using a software product.
8. Regression models and their use in forecasting.
9. One-factor and multi-factor analysis of variance.
10. Multifactor analysis of variance, practical cases of application of methods in a software product environment.

11. Nonparametric analysis of variance, solution of practical cases in the software product environment.
12. Presentation of the semester assignment and discussion.
13. Presentation of the semester assignment and discussion.

DESCRIPTION OF COURSE

University: University of Economics in Bratislava	
Faculty: Faculty of Business Economics with seat in Košice	
Course code: KOP PHF/PPO22300/22	Title of course: Retail Management
Type, load and method of teaching activities: Form of course: Lecture / Practical Recommended load of course (number of lessons): Per week: 2 / 2 Per course: 26 / 26 Method of study: present	
Number of credits: 7	
Recommended semester/trimester of study: 3.	
Degree of study: II.	
Prerequisites: KOP PHF/PPO22303/22-Marketing Management	
Requirements to complete the course: Evaluation during semester: 40% term assignment - 15% continuous assessment test – 15% activity at exercises 10% Exam: final written test and oral exam together 60 %	
Student workload: Total student workload: 182 hours participation in lectures – 26 hours participation in active lectures - 26 hours participation in active forms - 26 hours processing of semester assignment - 26 hours preparation for continuous assessment test – 26 hours preparation for the exam - 52 hours Total: 182 hours	
Teaching results: The aim of the course is to prepare students for changes in development trends in retail, which respond in a fundamental way to new phenomena in the economy, gradual globalization, and changes in business structures. In addition to theoretical knowledge, attention is also focused on specific practical examples and their use in the practice of a business firm. Knowledge: Students acquire the ability to understand the changing strategies of management of business firms, they can apply knowledge of management of business firm, human resources, and ethical principles of business conduct in practice. Competence: From the acquired theoretical knowledge, students can systematize their knowledge in the field of retail management in relation to current trends and requirements of business practice, as well as critically analyze and evaluate individual elements of management of business firm. The competencies acquired in the teaching process make it possible to creatively assess the basic context in the management of retail activities of business entities and make decisions based on their knowledge. The goal is to achieve a high degree of independence and foresight in a known and	

unknown environment. Work proactively and responsibly as part of a work team. Application of innovative and creative thinking supported by professional presentation of the results of one's own study or practice.

Skill:

Students can integrate individual specific attributes of retail management into a comprehensive whole and apply the acquired knowledge in solving practical tasks. They develop the ability to systematically search, analyze and process the necessary information for processing the semester assignment. At the same time, during the processing of the semester assignment, they also develop the soft skills, such as teamwork and communication skills. The case study platform motivates the student to further self-education in order to gain an advantage. Requirement of securing computer rooms for seminars for the needs of processing assignments in class. During the seminars, a space is created for each student to justify the sequence of steps implemented by him, the correctness of understanding and problem solving is verified, while other students are also involved in the discussion. The course of the lesson is managed by the teacher, who responds to a possible critical response of other students and directs the factual controversy of the discussed problem. For student activity, factual comments and observations, the teacher awards points, which are included in the evaluation of the subject. It supports the interest and activity of the listeners. During seminars and exams, the student develops his communication skills and ability to think critically in collective analyzes as well as in the defense of his analyzes and topics.

Indicative content:

Lectures:

1. Importance of trade function
2. Business branch, business company, management of business companies
3. Store retail - retail formats
4. Business logistics
5. Spatial structure of retail
6. Methods of quantification of spatial planning
7. Planning and organizing a business company
8. Human resources management in a trading company
9. Requested lecture by a representative of the selected business company
- 10 .. Management of the movement of goods in the company
11. Pricing in a trading company.
12. Control, controlling, decision making in a business company
13. Management of business operations in a trading company

Seminars:

1. Introductory seminar, familiarization with the organization of work at the seminars and the conditions of the interim and overall assessment. Introduction to the issue - Meaning, definition and functions of trade in the economy
2. Statistical classification of economic activities SK NACE
3. Characteristic features of a retailing company
4. Types of retail establishments
5. Business logistics
6. Territorial organization of retail
7. Spatial planning quantification methods
8. Management of people in a business company
9. Continuous paper
10. Selected business firm decision
11. Presentation of semester assignments
12. Consumer behavior
13. Unfair commercial practices

DESCRIPTION OF COURSE

University: University of Economics in Bratislava	
Faculty: Faculty of Business Economics with seat in Košice	
Course code: KE PHF/PPE22606/22	Title of course: Seminar for Final Thesis 1
Type, load and method of teaching activities: Form of course: Lecture / Practical Recommended load of course (number of lessons): Per week: 0 / 2 Per course: 0 / 26 Method of study: present	
Number of credits: 2	
Recommended semester/trimester of study: 3.	
Degree of study: II.	
Prerequisites:	
Requirements to complete the course: individual work - elaboration of materials for the final thesis - 15% individual work - elaboration of literary research - 40% written test - 45%	
Student workload: participation at seminars (consultations) - 26 hrs. other activities - study of literature, preparation of materials for the final thesis - 26 hrs. Total: 52 hrs.	
Teaching results: The aim of the course is to provide students with knowledge of the basics of scientific work and the creation of professional work and to acquaint them with the basic requirements for the final thesis in the conditions of the university. The aim is also to teach students to solve professional and research problems in the field of business economics and management using available information sources, to formulate the research plan of the final work and to generalize the acquired results. Knowledge: on the procedure for solving professional and research problems in the field of business economics and management, on the basic documents governing the elaboration of the final thesis, on the procedures and requirements for the submission of the thesis, on the control of its originality, on the consent to its disclosure and on its defense. Competence: an independent and creative approach to solving economic and managerial problems, responsibility for compliance with relevant legislation, internal regulations, responsibility for respecting the usual ethical principles of scientific work. Skills: formulation of the main goal and partial goals of the final work, ability to obtain the necessary information from available sources, processing of materials for the final thesis and literary research, presentation of the results of the final thesis.	
Indicative content: Seminars:	

Basic requirements for the final work in the relevant documents of the university. Final thesis assignment. The current state of the problem at home and abroad. Literary research. Internet information sources (scientific databases, statistical databases). Search and use of information sources. Literary search processing. Citation according to STN ISO 690 and citation options. Object, subject and aims of the final work. System of methods and methodology of the final work. Evaluation of the supervisor and opponent of the final thesis. Methodology of the final thesis defence. Student's presentation during the defence of the final thesis.
